Education

Truman State University

Bachelor of Computer Science, Minor in Statistics

Kirkville, MO

Jan 2021 – May 2026

Achievements & Awards

- First Place TrumanHacks - 2021
- Twilio Prize Pickhacks - 2023

Experience

Truman State University

Reporting Analyst

Kirkville, MO

May 2025 – Present

- Developed and executed a complete data analysis pipeline in R to accurately quantify and track the organization's monthly customer call volume.
- Designed and implemented an executive level dashboard that visually represented key operational trends, enabling clear and efficient communication of performance metrics.
- Improved Director's oversight and resource planning by delivering a consistent, data-driven report that informed high-stakes staffing and operational allocation decisions.
- Dashboard Demo: https://itsc.shinyapps.io/ITSC_May2025

Truman State University

Academic Tutor

Kirkville, MO

Aug 2023 – Present

- Provided tailored academic support to Computer Science students, clarifying complex concepts and reinforcing foundational knowledge in **Object-Oriented Programming (OOP)**, **Foundations for Computer Science**, and **Data Structures & Algorithms**.
- Diagnosed individual learning gaps and challenges, developing customized study strategies to improve student comprehension and problem solving skills.
- Facilitated peer learning by connecting students for collaborative group study sessions, fostering a supportive environment that contributed to improved academic performance and retention.

Truman State University

Helpdesk Technician

Kirkville, MO

Feb 2023 – Present

- Provided comprehensive Tier 1 technical support to more than 3000 students, faculty, staff and parents, diagnosing and resolving various hardware and software issues to ensure operational continuity for the university community.
- Managed high-volume inbound inquiries and documented all support interactions within the OTRS ticket system, efficiently triaging calls received via operator, technical, and emergency classroom hotlines.
- Applied advanced problem-solving methodologies to accurately identify user needs and strategically route complex or persistent issues to specialized departmental teams, streamlining resolution workflows, and enhancing user satisfaction.

Skills

Programming Languages: Python, C++, Java, PHP, JavaScript, SQL, R

Libraries: Pandas, Numpy, Seaborn, Statsmodels, Flask, ggplot2, caret, randomForest, xgboost

Tools: Git, Docker, VS Code, Linux/Bash

Databases: SQLite, MySQL

Concepts: Algorithms, Data Structures, OOP, Machine Learning, Advanced Machine Learning with R

Projects

Scuba Helper (Skills: Python, HTML, CSS, Flask, Javascript) [GitHub](#)

- Engineered and deployed a full-stack web application (Scuba Helper) using Python and Flask on Google Cloud Platform, empowering scuba divers with advanced tools for proactive dive planning.
- Integrated a robust algorithm to generate highly conservative dive metrics, significantly enhancing diver safety by providing reliable, cautious planning insights.

Bioinformatics Pipeline for Sequence Alignment Scoring (Skills: Python, Excel, Data Analysis, R) [Google Drive](#)

- Designed a custom bioinformatics pipeline in Python and R, based on the BLOSUM algorithm, to generate an optimized protein sequence scoring matrix for a specific biological family.
- Performed in-depth data analysis on more than 150 protein sequences, collaborated with biology majors to validate contextual relevance, and successfully produced a numeric matrix designed to provide more accurate and conservative scores for targeted protein family alignments.
